OceanMaster Rust Converter

Characteristics

A water based synthetic rubber primer with an excellent conversion property for rusting surfaces. Converts corroded areas in metal into stable matter thus preventing rust from spreading further. It is used as a primer onto rusty surfaces when the conventional methods of rust removal are impractical or not cost effective.

Suitable for exterior and interior use and should be topcoated with the chosen paint system.

Application

Apply by brush, roller and air spray. Stir thoroughly to a homogenous consistency before use. Do not return unused material to the container.

Health and Safety

Provide adequate ventilation during use. Avoid contact with skin and eyes. Avoid breathing dust vapour or spray. Wear eye protection and gloves during use.
